

INSPIRE | EMPOWER | CONQUER

# MY INSPIRATION NEVER DIES

## THE WHY

Targeting head trauma and concussion, we are dedicated to the support of education and intervention of health, wellness and active living.

It takes a responsible solution to ensure it is not repeated and this can be done through early identification, procedural capability and education. The purpose of this project is to instil such a process for the broader community and provide an innovative, cost effective approach for prevention, tracking and support.

MY INSPIRATION NEVER DIES

PROJECT :

Spread the word by using the hash tag on your posts too #ConcussionTimeForChange.

R

## MIND REVOLUTION

The objective is to collaborate people, businesses and technologies to form solutions to reduce risk and minimise concussion and its negative impact on lives, the economy and well-being.

# ROADMAP : CONCUSSION TRACKING

In order for us to pave the way for a new baseline and standard we must have a plan. Through research, technology, policy, education, prevention and intervention we will challenge current "best practice".

## EDUCATION

Resources to educate communities on what concussion is, the signs and symptoms and tools to intervene and act, much like we with First Aid.

## CHECK - UP

National roll-out of GPTQA accredited check-up / baseline assessment services through schools, sporting clubs and workplaces.

## TRACKING

Integrated tracking tools that provide baseline data, observation tools and tracking tools for people post-event to ensure valid rehabilitation on a personalised timeline.

## HABITUAL CHANGE

Consistency in messaging and service availability through a network of allied health and commercial partners to create habitual change in the community.

## THE FUTURE | A SOLUTION

By committing to an end-to-end valid solution that incorporates existing best practice and innovative verified technologies that are applied with both purpose and reliability allows us to make immediate impact on the current population while simultaneously collecting essential data to future-proof our communities.

A process of assessing, educating and tracking concussion is not a diagnosis of its long-term impact on life nor a solution to stop concussion or reverse its affects.

It sheds a light on the need for processes to be implemented that will significantly expose the risks, prevent reoccurring concussions through due diligence and objectify a currently subjective system.

We can undoubtably save lives and foresee significant long-term disabilities through persistence in reducing the repetition of known knocks. MIND is joining the #ConcussionTimeForChange revolution to help, support and drive a new era of health and wellness.
